Can you make a list of all of the things Sean needs to survive? How will he obtain them all?
 What are the biggest dilemmas that Sean faces? How will he overcome them?
 Is he alone?

Task: Write the next paragraph of the story, use your answers from the question challenge to support you.

2

LO: to use brackets to add extra information.

Grammar/punctuation challenge

Brackets can be used to add extra information to a sentence. Remember that the sentence must make sense without the brackets.

e.g.

Starter: complete "Fluent in Five – Year 5, Week 1 - Day 2"

LO: to subtract fractions

Step 1

Convert both fractions to the same denominator by finding equivalent fractions.

$$\frac{3}{8} - \frac{1}{4} = \frac{3}{8} - \frac{2}{8}$$

Step 2

Subtract the numerators, but not the denominators.

$$\frac{3}{8} - \frac{2}{8} = \frac{1}{8}$$

Step 3

Simplify the answer if you can.

$\frac{1}{8}$ cannot be simplified as it is a unit fraction (numerator of 1).

However:

$$\frac{2}{6} \text{ the example answer can be simplified.}$$

$$\frac{2}{6} = \frac{1}{3}$$

	Convert Question to Same Denominator	Answer
$\frac{5}{6} - \frac{1}{2} =$	$(\times 3) \frac{5}{6} - \frac{3}{6} =$	$= \frac{2}{6} \text{ or } \frac{1}{3}$
$\frac{6}{8} - \frac{1}{2} =$		
$\frac{1}{2} - \frac{1}{6} =$		
$\frac{9}{16} - \frac{1}{4} =$		
$\frac{2}{5} - \frac{3}{10} =$		
$\frac{3}{8} - \frac{5}{24} =$		
$\frac{6}{7} - \frac{5}{14} =$		
$\frac{3}{4} - \frac{5}{12} =$		
$\frac{2}{3} - \frac{4}{9} =$		
$\frac{7}{8} - \frac{1}{2} =$		
$\frac{5}{6} - \frac{1}{5} =$		
$\frac{1}{3} - \frac{1}{4} =$		
$\frac{2}{5} - \frac{1}{8} =$		

LO: to describe how we know Earth is a spherical body

Watch the video or do your own research:

<https://www.bbc.co.uk/bitesize/clips/zd3fb9q>

Use the video or carry out your own research to:

Create a poster to show someone how we know the Earth is round

Consider:

- Constellations
- Boats on the horizon
- Eclipses

	<p>Sean (who sat on the decking) was surrounded by exotic fish.</p> <p>Add extra information in brackets to these sentences.</p> <p>Sean's home (_____) was quite comfortable.</p> <p>The sea (_____) was filled with colourful fish.</p> <p>His house (_____) was surrounded with a frame.</p> <p>Sentence challenge These sentences are 'sick' and need your help to get better. Please help by adding brackets to include more information.</p> <p>Sean lived underwater. Lots of fish swam around him. The water was blue. The water was clear. He was alone.</p> <p>Extension: Picture it Design the perfect underwater home.</p>		<p><u>How do we know Earth is a spherical body?</u></p> <p>Aristotle observed that when ships sailed over the horizon the bottom part of a ship, the hull, actually disappeared from view. If it moved further the less of the ship you could see – this could only happen if the Earth was spherical.</p>   <p>If the Earth were flat then everyone would see the same constellations (groups of stars) wherever they were. However, travellers and sailors observed that in fact they saw different constellations depending on where they were.</p>
3	<p><u>LO: to recap fronted adverbials</u></p> <p>Go to: https://www.bbc.co.uk/bitesize/topics/zwwp8mn/articles/zp937p3</p> <p>Complete the tasks to recap fronted adverbials. Then, write a paragraph to describe the setting of this picture. Include at least five fronted adverbials.</p>	<p>Starter: complete "Fluent in Five – Year 5; Week 1 - Day 3"</p> <p><u>LO: to multiply fractions by whole numbers</u></p>	<p>P.E.</p> <p><u>LO: to complete a sequence of jumps</u></p> <p>You can play this by yourself or with someone at home! You will need a dice and paper to write your own set of exercises. If you don't have a dice, ask a parent to type 'dice' into Google for you to use.</p>

Remember: they come at the start of a sentence to tell you how, why or where something happened. Don't forget the comma!

Step 1

Multiplying means doing the same thing a certain amount of times. If I have $\frac{3}{4}$ and multiply it by 3, that means I need $\frac{3}{4}$, 3 times.

$$\frac{3}{4} \times 3 = \frac{9}{4}$$

Step 2

Multiply the numerator by the whole number.
 $3 \times 3 = 9$ so 9 is our answer's numerator.

$$\frac{3}{4} \times 3 = \frac{9}{4}$$

Step 3

Convert into a mixed number where necessary by using your denominator to help you work out how many wholes you have.

$$\frac{9}{4}$$

$$9 \text{ (numerator)} \div 4 \text{ (denominator)} = 2 \text{ r } 1$$

...so our answer is $2 \frac{1}{4}$

	Answer as an Improper Fraction	Answer as a Mixed Number
$\frac{3}{4} \times 3$	$\frac{9}{4}$	$2 \frac{1}{4}$
$\frac{1}{7} \times 5$		
$\frac{2}{5} \times 6$		
$\frac{2}{10} \times 9$		
$\frac{5}{7} \times 3$		
$\frac{5}{8} \times 2$		
$\frac{7}{12} \times 8$		
$\frac{4}{5} \times 4$		
$\frac{9}{11} \times 7$		
$\frac{6}{7} \times 12$		
$\frac{1}{2} \times 5$		
$\frac{3}{8} \times 7$		
$\frac{8}{9} \times 4$		

How to play:

- Play with a partner, take turns to roll a dice.
 - Look at the number you have rolled and then complete the correct jumping exercises:
- Roll a 1** – Perform 20 star jumps
Roll a 2 – Perform 20 tuck jumps
Roll a 3 – Perform 20 pencil jumps
Roll a 4 – Perform 20 jumps with a $\frac{1}{2}$ turn
Roll a 5 – Perform 20 jumps with a full turn
Roll a 6 – Perform 20 squat jumps
- The first player to complete all of the activities listed above is the winner.

This video demonstrates each move:

https://www.youtube.com/watch?v=ufTx2tiT_VQ&list=PLnwoPgo24bhmqV8Y76iXnwYw9T9AlxbqJ&index=25&t=0s

Challenge: make your own 6 moves and change how many of each!

4

LO: to infer using information in a picture

1. Where in the world could this be? What clues are there to suggest this?
2. Think of three words to describe the landscape and environment of this scene

Starter: complete "Fluent in Five – Year 5; Week 1 - Day 4"

LO: to calculate area of rectangles

Design & Technology
LO: to design a product and suggest improvements

Upcycling, upcycling!

Choose an item within the house that you do not use anymore - this could be an old item of clothing, accessory or household item. Your task is to upcycle it to make a new item that you will use! Evaluate the product and identify any areas that you could improve if they were to make it again.

- Why do you think the houses are mainly painted white?
- What time of day do you think this is? What clues are there to suggest this?
- How many people live here? Why do you think this?
- How old do you think this village is? What makes you think this?

Step 1
The area tells you space inside a shape.
To work out the area of a rectangle, or square, multiply the width by the length.

$A = l \times w$
 $Area = 4 \times 2$

So the area = 8

Step 2
Once you've calculated your area, ensure that you write the correct unit of measure. This rectangle has been measured in cm, we then need to use the squared symbol as it's measured in 2 directions.

$Area = 4 \times 2 = 8 \text{ cm}^2$

Step 3
To work out the area of composite or compound shapes (all rectangular), split the shape into appropriate rectangles and work out the area for them individually. Then add them together to get the area of the whole shape.

The area for this rectangle is 4cm^2 as $2 \times 2 = 4$

The area for this rectangle is 2cm^2 as $2 \times 1 = 2$

The total area = 6cm^2
 $4\text{cm}^2 + 2\text{cm}^2 = 6\text{cm}^2$

Other shapes and their areas:
 - Rectangle (8cm x 5cm): $A =$
 - Rectangle (12cm x 3cm): $A =$
 - Square (10cm x 10cm): $A =$
 - Rectangle (4cm x 11cm): $A =$
 - L-shaped compound shape (31cm x 2cm): $A =$
 - L-shaped compound shape (8cm x 15cm): $A =$

Extension: write a set of instructions so someone else can upcycle to make your product!

5

LO: to write a setting description

Find the definitions for each of these words:

- Mediterranean
- coastal
- dusk
- environment

Starter: complete "Fluent in Five – Year 5; Week 1 - Day 5"

LO: to round numbers to 10,000

<https://www.topmarks.co.uk/maths-games/rocket-rounding>

If you find this tricky, select "with number line".
If you feel confident, select, "without number line"

For an extra challenge: complete the "up to 9.9 to the nearest whole number"

P.E./music

LO: to move in time to a beat.

Choose your favourite song that has a quick beat.

How to play:

- On the spot can you start by clapping in time to the music?
- Keep clapping but can you now move your feet in time to the music by marching on the spot?
- Now can you start to walk around the space by clapping and walking in time to the music?
- Challenge yourself to add new movements like heel flicks, side steps, knees up, spins, turns. Can you do these in time to the music?

<p>twilight antiquated temperate sparsity climate luminescence inhabitants traditional</p> <p>Task: Now that you know the words, use them to write a setting description.</p> <p>Success criteria:</p> <ul style="list-style-type: none"> • At least 5 words from list • Fronted adverbial (how, where or when something happened) • Brackets to include extra information 		<p>Extra challenges:</p> <ol style="list-style-type: none"> 1) Choose a quicker song 2) Encourage someone at home to join in! <p>This video explains in detail: https://www.youtube.com/watch?v=ALmZzLVORas&list=PLnwoPgo24bhmqV8Y76iXnwYw9T9AlxbqJ&index=27&t=0s</p>
---	--	--

Extra maths fun!

<p><u>My Favourite Number</u></p> <p>Your challenge How much do you know about your favourite number? What to do:</p> <ol style="list-style-type: none"> 1. What's your favourite number? Write it down in the centre of a piece of plain paper (if you don't have a favourite number, pick a number at random). 2. Note down at least 20 facts about the number around your number, creating a poster. Examples you could choose include factors, multiples, even/odd, square number, sides on a shape etc. 3. For example, if your favourite number was 32, you could write down facts like: <ul style="list-style-type: none"> • It's a multiple of 1, 2, 4, 8 and 16 • It's an even number • $32 \times 2 = 64$ • $1 + 31 = 32$ <p>Try to make sure you have a good range of different types of facts. Be as creative as you can with how you present your work</p>	<p><u>Product Hunt</u></p> <p>Your challenge: How many products can you make out of 4 digits?</p> <p>How to play:</p> <ol style="list-style-type: none"> 1. You have the digits 4, 5, 7, and 8. You need to arrange them into a multiplication question like this: $HTO \times O = ?$ For example, you could make $458 \times 7 = ?$ 2. In each question, you can only use each digit once. Work out the answer to your calculation, using any method you like (but don't use a calculator!). 	<p><u>Fraction Hunting</u></p> <p>Your challenge: Can you apply your knowledge of fractions to everyday life?</p> <p>What to do:</p> <ol style="list-style-type: none"> 1. Find a recipe for something you could make (a meal, cakes, slime, whatever you can find!). 2. Write the ingredients on a piece of paper. 3. Find these fractions of the recipe and write it below the original ingredients list. <p>$\frac{1}{2}$ $\frac{1}{4}$ $\frac{2}{3}$ $\frac{3}{4}$</p>
---	---	---
