

Design & Technology subject intent:

- To develop children’s skills and knowledge in design, structures, mechanisms, electrical control and a range of materials, including food.
- To encourage children to develop their creativity and to consider important issues.
- To develop children’s problem-solving skills through evaluating and refining their own products.

How we support the needs of our children through teaching of DT:

- **Experiential learning** –Our curriculum allows children to experience the research, design, make, evaluate and refine process.
- **Self-esteem** – We provide opportunities for children to design and create their own products to help build our children’s confidence.
- **Resilience** - Children are taught to evaluate their products and have an opportunity to refine and improve them.
- **Cultural understanding** – Children will be able to make links to their Line of Enquiry by making real products to bring this to life.
- **Social skills** – Children will have opportunities to work in partners to construct products. They will also discuss their products and give peer feedback
- **General knowledge** – Children have knowledge of a range of tools and skills on how to use them through our curriculum.
- **Oracy skills** – Children are taught explicit vocabulary, specific to the area they are focusing on, across the school to discuss their creations.

How do we teach DT at Nova Primary?

Children will have a DT project based on their Line of Enquiry. Each project will require children to research and design their product thoroughly before they make it. At Nova, we will be focussing on evaluating their products and allow further experiences to refine their skills.
